Program-description of the Sytray-Termin-Wecker

(english : Systray-Timer)

The reason-idea of the program is the **fast inputs of an alarm-time** or memory-time over the alarm-time-directly-input or over the button "countdown in minutes" during the work for the PC and the fast **minimization** of the schedule **to the Systray**. **Everything of further proceeds automatically.** At the input time, you are reminded of the event over an acoustic signal and over a window as well as over the **PC shutdown (count-down)** - according to your input.
Immediately after the minimization into the Systray stands for every other work for you your PC to the disposal without problems.

The **program** is **in** two languages - **German and English** - employable. The in-position of the language takes place button "Options (German: Grundeinstellungen)" over this. Please here in the options do you input your name, the wave-file, the windows-version for shutdown and the countdown-time (30 until 0 seconds).

With the program, you can input a alarm-time with statement of the reason for the memory during the work for the computer of the current end-walk-time.

You can now minimize the program into the Systray and the program is also saved on that occasion.

- With a click with the left mouse-button on the Systray-Timer Systray-Icon, the program is shown again.
- With a click of the right mouse-button on this Systray-Icon, the remaining minutes you are shown until the alarm.
- Only if you puts the mouse-cursor on the Systray-Icon, and you find out the set alarm-time

After course of the time, an Alarm-Wave-File what you given in the options is played in an extra window of the program.
In the window you can see the reason of the alarm-time inputs. If you liked to be reminded of the reason later once again, you give this once more about the possibilities of the program.

Consequently, you are to be discontinued this time-date for itself in the situation, for example with Votungen of every three hours, from alarm to alarm. You cannot miss the reason consequently.
You can now concentrate work for computer without to forget a importend time and reason of the day.

The program possesses independent installation and deinstallation routines.

For the starting of the program during the installation is in a program-group, beside the start-button of Windows and on the desktop on your computer each one Icon create.

The program is for all Windows-versions employable from 95 until Windows 7 - also for the 64 bits-versions of XP (SP2+SP3), Vista and Windows 7.

Additional you can **shutdown the computer** over the ratio-button in the program-start-window.
Another possibility consists of the **automatic starting another programs**, and the **start of e-mail-standard-program** with opening of an new e-mail page, the **start of the standard-IN-browser** and a **New-start of the PC** (Windows-system new start) and a **start of the registry-file** (Registry-Editor) and the Windows-Defrag-Program**.**
